PROFESSIONAL SUMMARY

Self-taught Full Stack Developer specialized in custom software, automation, and AI applied to business. In just over a year I went from AI automations to building complete software products —from the data model to VPS deployment— with Next.js, Node/Nest, SQL and NoSQL databases, job queues, and AI agent integration. I built a **modular ERP on my own in 3 weeks**, the size a team would take months to deliver. Strong in execution speed, product architecture, and real-world application of AI to business.

PROFESSIONAL EXPERIENCE

Modular Multi-Industry ERP

- Businesses across different industries rely on spreadsheets or closed systems that don't fit their operation.
- Designed and coded the entire architecture on my own: **12+ interconnected modules** (CRM, Sales, Purchasing, Inventory, Work Orders, Finance/Cash, Warranties, Appointments, My Business, Map, Notifications, and AI via MCP) on Next.js 14 + MySQL, multi-tenant, with a sidebar that reconfigures per industry.
- Designed to adapt to any industry: repair shops, retail, logistics, clinics, workshops, and professionals.
- A complete, functional product, **built end-to-end in 3 weeks** — work a team of ~5 devs would take months to complete.

Municipal Management System (GovTech) — City Council of Ezeiza

- A council bloc needed real data on residents' complaints to support ordinances and projects.
- Built the platform with Next.js + Prisma, job queues (**Redis/BullMQ**), file storage on **AWS S3**, geolocated complaints on a map, and WhatsApp support with AI.
- Cross-references complaints against the municipality's resolution rate to drive new ordinances and projects.
- A real product in production** processing **6,000+ messages per month** across queries and complaints.

20+ WhatsApp Bots with AI Agents

- Businesses and professionals across industries were losing sales and time replying by hand.
- Built **20+ bots in production** (furniture stores, repair services, clinics, professionals, and more) with Claude + custom tools (**MCP**) over Evolution API.
- The agents book appointments, handle complaints, send confirmations, and query system data — not just reply with text.

Internal Panel with AI and Automated Prospecting

- Lead capture and follow-up were done by hand and went cold.
- Panel in Next.js + Prisma that captures leads and sends them **automated AI messages (Claude)** until converting them into clients.
- Integrated the **Google Analytics API** (Admin + Data) for real metrics inside the same panel.

SPECIALTIES

- Full Stack (front + back)
- REST APIs
- Modular ERPs · multi-tenant
- Offline apps / PWA
- SQL & NoSQL databases
- Queues & scheduled tasks
- Chatbots & AI agents (MCP)
- Process automation
- Payments · email · analytics
- Auth & security
- VPS deploy (Docker · CI/CD)
- Reports & export (Excel · PDF · QR)

TOOLS & TECHNOLOGIES

- JavaScript
- TypeScript
- React
- Next.js
- Vue 3
- Vite
- Tailwind CSS
- Node.js
- NestJS
- Express
- Prisma
- Mongoose
- MySQL
- MongoDB
- Redis
- BullMQ
- Anthropic Claude
- OpenAI
- Gemini
- Groq
- MCP
- Evolution API (WhatsApp)
- NextAuth
- JWT / Passport
- bcrypt
- helmet
- MercadoPago
- Google Analytics API
- Google OAuth / One Tap
- Resend
- AWS S3
- Cloudinary
- Sharp
- Multer
- Leaflet
- Chart.js
- ReactFlow
- XLSX
- jsPDF
- qrcode
- Fuse.js
- PWA (Dexie)
- Jest
- Supertest
- Docker
- Caddy
- Nginx
- Nixpacks
- Easypanel
- GitHub Actions
- Git

SKILLS

- Logical reasoning** — the foundation of how I solve and build
- Fast problem comprehension** — I get to the core, no detours
- Autonomous learning & adaptability** — whatever stack it takes
- Problem-solving & debugging** — even in other people's code
- Autonomy / ownership** — from data model to deploy, on my own
- Resilience & frustration tolerance** — I keep going until it works
- Analytical & product thinking** — I decide with judgment
- Self-discipline & time management** — self-taught, no classroom

LANGUAGES

- Spanish**
Native
- English**
Intermediate reading and listening comprehension (~70%) · basic speaking

SELF-TAUGHT EDUCATION

- Feb 2025** — Applied AI and process automation with n8n.
- Aug 2025** — Software development in C# and PHP + JavaScript.
- Jan 2026** — Software architecture, VPS, and production deployment.
- Today** — End-to-end Full Stack with AI agents.
